

D2 FOR ENGINEERING

DMS for Construction Projects

You already have enough to worry about - project milestones, budget, and suppliers. Good thing you can leave document compliance to the experts with D2 for Engineering, a pre-configured document management system for contractors. S2 for Engineering enables organizations to comply with the industry's regulatory standards, eliminating the risk of potential fines and unnecessary hassles, so you can focus on delivering your projects on time and within budget.

Key Features

□ Document Management

Be ready for anything - even incoming physical documents! Accurately index files with the correct project code, document class, and other standard industry attributes. Allow for secure and easy retrieval for future reference.

□ Automated Transmittals Documents

Automatically generate transmittals with cover sheets for documents routed to external parties.

□ Powerful Search

Allow simple, advanced, or faceted searches for easy recovery of archived files.

□ Response Letters

Never miss important incoming letters as they are automatically assigned to the right recipient and tracked by the system.

□ Reports

Audit document activities through automated reports.

□ Automated Workflows

Route documents for review and approval, in sequence or in parallel.

□ Annotations

Allow users to review, comment, or redact items in documents - all within a digital platform.

□ Design Review Process

Facilitate review and approval of documents submitted by external parties. Help hasten the process by consolidating comments from multiple users.

□ Version Compares

Always be on top of version control by automating the comparison of different versions of a single document.

□ Mobile Accessibility

Access D2 for Engineering onsite or off through your mobile phone or tablet.
